Indistinguishablity of encryptions

The encryption of two strings is indistinguishable

Indistinguishablity

Indistinguishablity of encryptions

- The encryption of two strings is indistinguishable
- Less intuitive than semantic security, but easier to work with

Indistinguishablity of encryptions – private-key model

Definition 3 (Indistinguishablity of encryptions – private-key model)

An encryption scheme (G, E, D) has indistinguishable encryptions in the private-key model, if for any $p, \ell \in \text{poly}$, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}, \, \{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}} \, \text{and poly-time B,}$

$$\left| \Pr_{e \leftarrow G(1^n)_1} [\mathsf{B}(z_n, E_e(x_n)) = 1] - \Pr_{e \leftarrow G(1^n)_1} [\mathsf{B}(z_n, E_e(y_n)) = 1] \right|$$

= neg(n)

Indistinguishablity of encryptions – private-key model

Definition 3 (Indistinguishablity of encryptions – private-key model)

An encryption scheme (G, E, D) has indistinguishable encryptions in the private-key model, if for any $p, \ell \in \text{poly}$, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$, $\{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}}$ and poly-time B,

$$|\Pr_{e \leftarrow G(1^n)_1}[B(z_n, E_e(x_n)) = 1] - \Pr_{e \leftarrow G(1^n)_1}[B(z_n, E_e(y_n)) = 1]|$$

= $neg(n)$

Non-uniform definition

Definition 3 (Indistinguishablity of encryptions – private-key model)

An encryption scheme (G, E, D) has indistinguishable encryptions in the private-key model, if for any $p, \ell \in \text{poly}$, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}, \{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}}$ and poly-time B,

$$|\Pr_{e \leftarrow G(1^n)_1}[B(z_n, E_e(x_n)) = 1] - \Pr_{e \leftarrow G(1^n)_1}[B(z_n, E_e(y_n)) = 1]|$$

= $neg(n)$

- Non-uniform definition
- Public-key variant

Equivalence of definitions

Theorem 4

An encryption scheme (G, E, D) is semantically secure iff is has indistinguishable encryptions.

Equivalence of definitions

Theorem 4

An encryption scheme (G, E, D) is semantically secure iff is has indistinguishable encryptions.

We prove the private key case

Indistinguishablity \implies Semantic Security

Indistinguishablity Semantic Security

Fix \mathcal{X} , A, f and h, be as in Definition 2.

Indistinguishablity Semantic Security

Fix \mathcal{X} , A, f and h, be as in Definition 2. We construct A' as

Algorithm 5 (A')

Input: 1^n , $1^{|x|}$ and h(x)

- $\bullet e \leftarrow G(1^n)_1$
- 2 $c = E_e(1^{|x|})$
- **3** Output $A(1^n, 1^{|x|}, h(x), c)$

Indistinguishablity Semantic Security

Fix \mathcal{X} , A, f and h, be as in Definition 2. We construct A' as

Algorithm 5 (A')

Input: 1^n , $1^{|x|}$ and h(x)

- $\bullet e \leftarrow G(1^n)_1$
- 2 $c = E_e(1^{|x|})$
- **3** Output $A(1^n, 1^{|x|}, h(x), c)$

Claim 6

A' is a good simulator for A (according to Definition 2)

Definitions

OOOOOOO

Proving Claim 6

Assume exists infinite $\mathcal{I} \subseteq \mathbb{N}$ and $p \in \text{poly s.t.}$ for any $n \in \mathcal{I}$:

$$\begin{aligned} \left| \mathsf{Pr}_{x \leftarrow \mathcal{X}_n, e \leftarrow G(1^n)_1} [\mathsf{A}(1^n, 1^{|x|}, h(1^n, x), E_e(x)) = f(1^n, x)] \right. \\ \left. - \mathsf{Pr}_{x \leftarrow \mathcal{X}_n} [\mathsf{A}'(1^n, 1^{|x|}, h(1^n, x)) = f(1^n, x)] \right| > 1/p(n) \end{aligned}$$

000000000000

Equivalence

Proving Claim 6

Assume exists infinite $\mathcal{I} \subseteq \mathbb{N}$ and $p \in \text{poly s.t.}$ for any $n \in \mathcal{I}$:

$$\begin{aligned} \left| \mathsf{Pr}_{x \leftarrow \mathcal{X}_n, e \leftarrow G(1^n)_1} [\mathsf{A}(1^n, 1^{|x|}, h(1^n, x), E_e(x)) = f(1^n, x)] \right. \\ \left. - \mathsf{Pr}_{x \leftarrow \mathcal{X}_n} [\mathsf{A}'(1^n, 1^{|x|}, h(1^n, x)) = f(1^n, x)] \right| > 1/p(n) \end{aligned}$$

Fix $n \in \mathcal{I}$ and let $x_n \in \text{Supp}(\mathcal{X}_n)$ be a value that maximize Equation (1).

Proving Claim 6

Assume exists infinite $\mathcal{I} \subseteq \mathbb{N}$ and $p \in \text{poly s.t.}$ for any $n \in \mathcal{I}$:

$$\begin{aligned} \left| \mathsf{Pr}_{x \leftarrow \mathcal{X}_n, e \leftarrow G(1^n)_1} [\mathsf{A}(1^n, 1^{|x|}, h(1^n, x), E_e(x)) = f(1^n, x)] \right. \\ \left. - \mathsf{Pr}_{x \leftarrow \mathcal{X}_n} [\mathsf{A}'(1^n, 1^{|x|}, h(1^n, x)) = f(1^n, x)] \right| > 1/p(n) \end{aligned}$$

Fix $n \in \mathcal{I}$ and let $x_n \in \text{Supp}(\mathcal{X}_n)$ be a value that maximize Equation (1).

Consider B that contradicts the indistinguishability of the scheme with respect to $\{(x_n, y_n = 1^{|x_n|})\}_{n \in \mathbb{N}}$ and $\{z_n = (1^n, 1^{|x_n|}, h(1^n, x_n), f(1^n, x_n))\}_{n \in \mathbb{N}}$.

Proving Claim 6

Assume exists infinite $\mathcal{I} \subseteq \mathbb{N}$ and $p \in \text{poly s.t.}$ for any $n \in \mathcal{I}$:

$$\begin{aligned} \left| \mathsf{Pr}_{x \leftarrow \mathcal{X}_n, e \leftarrow G(1^n)_1} [\mathsf{A}(1^n, 1^{|x|}, h(1^n, x), E_e(x)) = f(1^n, x)] \right. \\ \left. - \mathsf{Pr}_{x \leftarrow \mathcal{X}_n} [\mathsf{A}'(1^n, 1^{|x|}, h(1^n, x)) = f(1^n, x)] \right| > 1/p(n) \end{aligned}$$

Fix $n \in \mathcal{I}$ and let $x_n \in \text{Supp}(\mathcal{X}_n)$ be a value that maximize Equation (1).

Consider B that contradicts the indistinguishability of the scheme with respect to $\{(x_n, y_n = 1^{|x_n|})\}_{n \in \mathbb{N}}$ and $\{z_n = (1^n, 1^{|x_n|}, h(1^n, x_n), f(1^n, x_n))\}_{n \in \mathbb{N}}$.

Algorithm 7 (B)

Input: $z_n = (1^n, 1^{|x_n|}, h(1^n, x), f(1^n, x)), c$ Output 1 iff $A(1^n, 1^{|x|}, h(x), c) = f(1^n, x)$

Semantic Security \implies **Indistinguishablity**

Assume \exists B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n\}_{n \in \mathbb{N}}$ that contradict the semantic security of semantic security.

Semantic Security \implies Indistinguishablity

Assume \exists B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n\}_{n \in \mathbb{N}}$ that contradict the semantic security of semantic security. Let \mathcal{X}_n be x_n wp $\frac{1}{2}$ and y_n otherwise, let $f(1^n, x_n) = 1$ and $f(1^n, y_n) = 0$ and let $h(1^n, \cdot) = z_n$).

Semantic Security \implies Indistinguishablity

Assume \exists B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n\}_{n \in \mathbb{N}}$ that contradict the semantic security of semantic security. Let \mathcal{X}_n be x_n wp $\frac{1}{2}$ and y_n otherwise, let $f(1^n, x_n) = 1$ and $f(1^n, y_n) = 0$ and let $h(1^n, \cdot) = z_n$). Finally, $A(1^n, 1^{\ell(n)}, z_n, c)$ returns $B(z_n, c)$.

Multiple Encryptions

Security Under Multiple Encryptions

Security Under Multiple Encryptions

Definition 8 (Indistinguishablity for multiple encryptions – private-key model)

An encryption scheme (G, E, D) has indistinguishable encryptions for multiple messages in the private-key model, if for any $p, \ell, t \in poly$,

$$\{x_{n,1}, \dots x_{n,t(n)}, y_{n,1}, \dots, y_{n,t(n)} \in \{0,1\}^{\ell(n)}\}_{n \in \mathbb{N}},$$

 $\{z_n \in \{0,1\}^{p(n)}\}_{n \in \mathbb{N}}$ and polynomial-time B,

Multiple Encryptions

Multiple Encryption in the Public-Key Model

Theorem 9

A public-key encryption scheme has indistinguishable encryptions for multiple messages, iff it has indistinguishable encryptions for a single message.

Multiple Encryption in the Public-Key Model

Theorem 9

A public-key encryption scheme has indistinguishable encryptions for multiple messages, iff it has indistinguishable encryptions for a single message.

Proof: Assume (G, E, D) is public-key secure for a single message and not for multiple messages with respect to B, $\{x_{1,t(n)}, \dots, x_{n,t(n)}, y_{n,1}, \dots, y_{n,t(n)} \in \{0,1\}^{\ell(n)}\}_{n \in \mathbb{N}}, \{z_n \in \{0,1\}^{p(n)}\}_{n \in \mathbb{N}}.$

Multiple Encryption in the Public-Key Model

Theorem 9

A public-key encryption scheme has indistinguishable encryptions for multiple messages, iff it has indistinguishable encryptions for a single message.

Proof: Assume (G, E, D) is public-key secure for a single message and not for multiple messages with respect to B,

$$\{X_{1,t(n)},\ldots X_{n,t(n)}, y_{n,1},\ldots, y_{n,t(n)} \in \{0,1\}^{\ell(n)}\}_{n\in\mathbb{N}},\$$

 $\{Z_n \in \{0,1\}^{p(n)}\}_{n\in\mathbb{N}}.$

It follows that for some function $i(n) \in [t(n)]$

$$\begin{aligned} & \left| \text{Pr}[\text{B}(1^n, e, E_e(x_{n,1}), \dots, E_e(x_{n,i-1}), E_e(y_{n,i}), \dots, E_e(y_{n,t(n)})) = 1] \right. \\ & \left. - \text{Pr}[\text{B}(1^n, e, E_e(x_{n,1}), \dots, E_e(x_{n,i}), E_e(y_{n,i+1}), \dots, E_e(y_{n,t(n)})) = 1] \right| \\ & > \text{neg}(n) \end{aligned}$$

where in both cases $e \leftarrow G(1^n)_1$

Algorithm 10 (B')

Input: 1^n , $z_n = i(n)$, e, c

Return B($c, E_e(x_{n,1}), \dots, E_e(x_{n,i-1}), c, E_e(y_{n,i+1}), \dots, E_e(y_{n,t(n)})$)

Algorithm 10 (B')

Input: 1^n , $z_n = i(n)$, e, c

Return B($c, E_e(x_{n,1}), \dots, E_e(x_{n,i-1}), c, E_e(y_{n,i+1}), \dots, E_e(y_{n,t(n)})$)

B' is critically using the public key

Multiple Encryptions

Multiple Encryption in the Private-Key Model

Fact 11

Assuming (non uniform) OWFs exists, there exists an encryption scheme that has private-key indistinguishable encryptions for a single messages, but not for multiple messages

Multiple Encryptions

Multiple Encryption in the Private-Key Model

Fact 11

Assuming (non uniform) OWFs exists, there exists an encryption scheme that has private-key indistinguishable encryptions for a single messages, but not for multiple messages

Proof: Let $g: \{0,1\}^n \mapsto \{0,1\}^{n+1}$ be a (non-uniform) PRG, and for $i \in \mathbb{N}$ let g^i be its "iterated extension" to output of length i (see Lecture 2, Construction 15).

Fact 11

Assuming (non uniform) OWFs exists, there exists an encryption scheme that has private-key indistinguishable encryptions for a single messages, but not for multiple messages

Proof: Let $g: \{0,1\}^n \mapsto \{0,1\}^{n+1}$ be a (non-uniform) PRG, and for $i \in \mathbb{N}$ let g^i be its "iterated extension" to output of length i (see Lecture 2, Construction 15).

Construction 12

- $G(1^n)$ outputs $e \leftarrow \{0,1\}^n$,
- $E_e(m)$ outputs $g^{|m|}(e) \oplus m$
- $D_e(c)$ outputs $g^{|c|}(e) \oplus c$

Multiple Encryptions

Claim 13

 $(\emph{G}, \emph{E}, \emph{D})$ has private-key indistinguishable encryptions for a single message

Proof:

(G, E, D) has private-key indistinguishable encryptions for a single message

Proof: Assume not, and let B, $\{x_n,y_n\in\{0,1\}^{\ell(n)}\}_{n\in\mathbb{N}}$ and $\{z_n\in\{0,1\}^{p(n)}\}_{n\in\mathbb{N}}$ be the triplet that realizes it.

(G, E, D) has private-key indistinguishable encryptions for a single message

Proof: Assume not, and let B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}}$ be the triplet that realizes it. Wlog,

$$|\Pr[\mathsf{B}(z_n, g^{|x_n|}(U_n) \oplus x_n) = 1] - \Pr[\mathsf{B}(z_n, U_{|x_n|} \oplus x_n) = 1]| > \mathsf{neg}(n)$$
 (2)

(G, E, D) has private-key indistinguishable encryptions for a single message

Proof: Assume not, and let B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}}$ be the triplet that realizes it. Wlog,

$$|\Pr[\mathsf{B}(z_n, g^{|x_n|}(U_n) \oplus x_n) = 1] - \Pr[\mathsf{B}(z_n, U_{|x_n|} \oplus x_n) = 1]| > \mathsf{neg}(n)$$
 (2)

Hence, B implies a (non-uniform) distinguisher for g

(G, E, D) has private-key indistinguishable encryptions for a single message

Proof: Assume not, and let B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}}$ be the triplet that realizes it. Wlog,

$$|\Pr[\mathsf{B}(z_n, g^{|X_n|}(U_n) \oplus X_n) = 1] - \Pr[\mathsf{B}(z_n, U_{|X_n|} \oplus X_n) = 1]| > \mathsf{neg}(n)$$
 (2)

Hence, B implies a (non-uniform) distinguisher for g

Claim 14

(G, E, D) does not have a private-key indistinguishable encryptions for multiple messages

(G, E, D) has private-key indistinguishable encryptions for a single message

Proof: Assume not, and let B, $\{x_n, y_n \in \{0, 1\}^{\ell(n)}\}_{n \in \mathbb{N}}$ and $\{z_n \in \{0, 1\}^{p(n)}\}_{n \in \mathbb{N}}$ be the triplet that realizes it. Wlog,

$$|\Pr[\mathsf{B}(z_n, g^{|x_n|}(U_n) \oplus x_n) = 1] - \Pr[\mathsf{B}(z_n, U_{|x_n|} \oplus x_n) = 1]| > \mathsf{neg}(n)$$
 (2)

Hence, B implies a (non-uniform) distinguisher for g

Claim 14

(G, E, D) does not have a private-key indistinguishable encryptions for multiple messages

Proof:

(G, E, D) has private-key indistinguishable encryptions for a single message

Proof: Assume not, and let B, $\{x_n,y_n\in\{0,1\}^{\ell(n)}\}_{n\in\mathbb{N}}$ and $\{z_n\in\{0,1\}^{p(n)}\}_{n\in\mathbb{N}}$ be the triplet that realizes it. Wlog,

$$|\Pr[\mathsf{B}(z_n, g^{|X_n|}(U_n) \oplus X_n) = 1] - \Pr[\mathsf{B}(z_n, U_{|X_n|} \oplus X_n) = 1]| > \mathsf{neg}(n)$$
 (2)

Hence, B implies a (non-uniform) distinguisher for g

Claim 14

(G, E, D) does not have a private-key indistinguishable encryptions for multiple messages

Proof: Take $x_{n,1} = x_{n,2}$, $y_{n,1} \neq x_{n,2}$ and $D(c_1, c_2)$ outputs 1 iff $c_1 = c_2$

Section 2

Constructions

Suffice to encrypt messages of a single length (here the length is n).

Suffice to encrypt messages of a single length (here the length is n).

Let \mathcal{F} be a (non-uniform) length preserving PRF

Suffice to encrypt messages of a single length (here the length is *n*).

Let \mathcal{F} be a (non-uniform) length preserving PRF

Construction 15

- $G(1^n)$: output $e \leftarrow \mathcal{F}_n$,
- $E_e(m)$: choose $r \leftarrow \{0,1\}^n$ and output $(r, e(r) \oplus m)$
- $D_e(r, c)$: output $e(r) \oplus c$

Suffice to encrypt messages of a single length (here the length is n).

Let \mathcal{F} be a (non-uniform) length preserving PRF

Construction 15

- $G(1^n)$: output $e \leftarrow \mathcal{F}_n$,
- $E_e(m)$: choose $r \leftarrow \{0,1\}^n$ and output $(r, e(r) \oplus m)$
- $D_e(r, c)$: output $e(r) \oplus c$

Claim 16

(*G*, E, D) has private-key indistinguishable encryptions for a multiple messages

Suffice to encrypt messages of a single length (here the length is n).

Let \mathcal{F} be a (non-uniform) length preserving PRF

Construction 15

- $G(1^n)$: output $e \leftarrow \mathcal{F}_n$,
- $E_e(m)$: choose $r \leftarrow \{0,1\}^n$ and output $(r, e(r) \oplus m)$
- $D_e(r, c)$: output $e(r) \oplus c$

Claim 16

(G, E, D) has private-key indistinguishable encryptions for a multiple messages

Proof:

Let (G, f, Inv) be a (non-uniform) family of trapdoor permutations (see Lecture 6, Def 8) and let b be an hardcore predicate for f.

Let (G, f, Inv) be a (non-uniform) family of trapdoor permutations (see Lecture 6, Def 8) and let b be an hardcore predicate for f.

Construction 17 (bit encryption)

- $G(1^n)$: output $(e, d) \leftarrow G(1^n)$
- $E_e(m)$: choose $r \leftarrow \{0,1\}^n$ and output $(y = f_e(r), c = b(r) \oplus m)$
- $D_d(y, c)$: output $b(Inv_d(y)) \oplus c$

Let (G, f, Inv) be a (non-uniform) family of trapdoor permutations (see Lecture 6, Def 8) and let b be an hardcore predicate for f.

Construction 17 (bit encryption)

- $G(1^n)$: output $(e, d) \leftarrow G(1^n)$
- $E_e(m)$: choose $r \leftarrow \{0,1\}^n$ and output $(y = f_e(r), c = b(r) \oplus m)$
- $D_d(y, c)$: output $b(Inv_d(y)) \oplus c$

Claim 18

(G, E, D) has public-key indistinguishable encryptions for a multiple messages

Let (G, f, Inv) be a (non-uniform) family of trapdoor permutations (see Lecture 6, Def 8) and let b be an hardcore predicate for f.

Construction 17 (bit encryption)

- $G(1^n)$: output $(e, d) \leftarrow G(1^n)$
- $E_e(m)$: choose $r \leftarrow \{0,1\}^n$ and output $(y = f_e(r), c = b(r) \oplus m)$
- $D_d(y, c)$: output $b(Inv_d(y)) \oplus c$

Claim 18

- (G, E, D) has public-key indistinguishable encryptions for a multiple messages
 - We believe that public-key encryptions are of different complexity than private-key ones

Section 3

Dream version

- Dream version
- Chosen plaintext attack (CPA):
 Adversary can ask for encryptions done by the encryption key

- Dream version
- Chosen plaintext attack (CPA):
 Adversary can ask for encryptions done by the encryption key
- Passive chosen ciphertext attack (CCA1): same as CPA, but the adversary can for decryptions using the decryption key, before seeing the challenge

- Dream version
- Chosen plaintext attack (CPA):
 Adversary can ask for encryptions done by the encryption key
- Passive chosen ciphertext attack (CCA1): same as CPA, but the adversary can for decryptions using the decryption key, before seeing the challenge
- Adaptive chosen ciphertext attack (CCA2): same as CCA2, but the adversary can for decryptions using the decryption key after seeing the challenge, but not of the challenge itself

Active Adversaries

- Dream version
- Chosen plaintext attack (CPA):
 Adversary can ask for encryptions done by the encryption key
- Passive chosen ciphertext attack (CCA1): same as CPA, but the adversary can for decryptions using the decryption key, before seeing the challenge
- Adaptive chosen ciphertext attack (CCA2): same as CCA2, but the adversary can for decryptions using the decryption key after seeing the challenge, but not of the challenge itself

Active Adversaries

- Dream version
- Chosen plaintext attack (CPA):
 Adversary can ask for encryptions done by the encryption key
- Passive chosen ciphertext attack (CCA1): same as CPA, but the adversary can for decryptions using the decryption key, before seeing the challenge
- Adaptive chosen ciphertext attack (CCA2): same as CCA2, but the adversary can for decryptions using the decryption key after seeing the challenge, but not of the challenge itself
- In the public-key settings, the adversary is also given the public key

Active Adversaries

- Dream version
- Chosen plaintext attack (CPA):
 Adversary can ask for encryptions done by the encryption key
- Passive chosen ciphertext attack (CCA1): same as CPA, but the adversary can for decryptions using the decryption key, before seeing the challenge
- Adaptive chosen ciphertext attack (CCA2): same as CCA2, but the adversary can for decryptions using the decryption key after seeing the challenge, but not of the challenge itself
- In the public-key settings, the adversary is also given the public key
- We focus on indistinguishability, but each of the above definitions has an equivalent semantic security variant.

CPA Security

Let (G, E, D) be an an encryption scheme. For a pair of alg. $A = (A_1, A_2), n \in \mathbb{N}, z \in \{0, 1\}^*$ and $b \in \{0, 1\}$, we let:

Experiment 19 ($Exp_{A,n,z_n}^{CPA}(b)$)

- **2** $(x_0, x_1, s) \leftarrow A_1^{E_e(\cdot)}(1^n, z)$
- $c \leftarrow \mathsf{E}_e(x_b)$
- Output $A_2^{E_e(\cdot)}(1^n, s, c)$

CPA Security

Let (G, E, D) be an an encryption scheme. For a pair of alg. $A = (A_1, A_2), n \in \mathbb{N}, z \in \{0, 1\}^*$ and $b \in \{0, 1\}$, we let:

Experiment 19 ($Exp_{A,n,z_n}^{CPA}(b)$ **)**

- **2** $(x_0, x_1, s) \leftarrow A_1^{E_{\theta}(\cdot)}(1^n, z)$
- $c \leftarrow \mathsf{E}_e(x_b)$
- Output $A_2^{E_e(\cdot)}(1^n, s, c)$

Definition 20 (private key CPA)

(G, E, D) has indistinguishable encryptions in the private-key model under CPA attack, if \forall PPT A_1, A_2 , and poly-bounded $\{z_n\}_{n\in\mathbb{N}}$:

$$|\Pr[\exp_{A,n,z_n}^{CPA}(0) = 1] - \Pr[\exp_{A,n,z_n}^{CPA}(1) = 1]| = neg(n)$$

 The scheme from Construction 15 has indistinguishable encryptions in the private-key model (for short, private-key CPA secure)

- The scheme from Construction 15 has indistinguishable encryptions in the private-key model (for short, private-key CPA secure)
- The scheme from Construction 17 has indistinguishable encryptions in the public-key model (for short, public-key CPA secure)

- The scheme from Construction 15 has indistinguishable encryptions in the private-key model (for short, private-key CPA secure)
- The scheme from Construction 17 has indistinguishable encryptions in the public-key model (for short, public-key CPA secure)
- In both cases, definitions are not equivalent

CCA Security

Experiment 21 ($Exp_{A,n,z_n}^{CCA1}(b)$ **)**

- **2** $(x_0, x_1, s) \leftarrow A_1^{E_e(\cdot), D_d(\cdot)}(1^n, z)$
- $c \leftarrow \mathsf{E}_e(x_b)$
- Output $A_2^{E_{\theta}(\cdot)}(1^n, s, c)$

CCA Security

Experiment 21 ($Exp_{A,n,z_n}^{CCA1}(b)$ **)**

- **2** $(x_0, x_1, s) \leftarrow A_1^{E_e(\cdot), D_d(\cdot)}(1^n, z)$
- $c \leftarrow \mathsf{E}_e(x_b)$
- Output $A_2^{E_e(\cdot)}(1^n, s, c)$

Experiment 22 ($Exp_{A,n,z_0}^{CCA2}(b)$)

- 2 $(x_0, x_1, s) \leftarrow A_1^{E_e(\cdot), D_d(\cdot)}(1^n, z)$
- $c \leftarrow \mathsf{E}_e(x_b)$
- Output $A_2^{E_e(\cdot),D_d^{\neg c}(\cdot)}(1^n,s,c)$

Definition 23 (private key CCA1/CCA2)

(G, E, D) has indistinguishable encryptions in the private-key model under $x \in \{CCA1, CCA2\}$ attack, if \forall PPT A_1, A_2 , and poly-bounded $\{z_n\}_{n \in \mathbb{N}}$:

$$|\Pr[\mathsf{Exp}^{\mathsf{X}}_{\mathsf{A},n,\mathsf{Z}_n}(0)=1] - \Pr[\mathsf{Exp}^{\mathsf{X}}_{\mathsf{A},n,\mathsf{Z}_n}(1)=1]| = \mathsf{neg}(n)$$

Definition 23 (private key CCA1/CCA2)

(G, E, D) has indistinguishable encryptions in the private-key model under $x \in \{CCA1, CCA2\}$ attack, if \forall PPT A_1, A_2 , and poly-bounded $\{z_n\}_{n \in \mathbb{N}}$:

$$|\Pr[\mathsf{Exp}_{\mathsf{A},n,z_n}^{\chi}(0) = 1] - \Pr[\mathsf{Exp}_{\mathsf{A},n,z_n}^{\chi}(1) = 1]| = \mathsf{neg}(n)$$

Constructing private-key CCA2 is not difficult

Definition 23 (private key CCA1/CCA2)

(G, E, D) has indistinguishable encryptions in the private-key model under $x \in \{CCA1, CCA2\}$ attack, if \forall PPT A_1, A_2 , and poly-bounded $\{z_n\}_{n \in \mathbb{N}}$:

$$|\Pr[\mathsf{Exp}_{\mathsf{A},n,z_n}^{\chi}(0) = 1] - \Pr[\mathsf{Exp}_{\mathsf{A},n,z_n}^{\chi}(1) = 1]| = \mathsf{neg}(n)$$

- Constructing private-key CCA2 is not difficult
- Private key CCA2 from TPD, but highly non trivial (next class)
