Distributions and Statistical Distance

Distributions and Statistical Distance

Let P and Q be two distributions over a finite set $\mathcal{U}$. Their *statistical distance* (also known as, variation distance), denoted by $\mathrm{SD}(P, Q)$, is defined as

$$\mathrm{SD}(P, Q) := \frac{1}{2} \sum_{x \in \mathcal{U}} |P(x) - Q(x)| = \max_{\mathcal{S} \subseteq \mathcal{U}} (P(\mathcal{S}) - Q(\mathcal{S}))$$

We will only consider finite distributions.

Distributions and Statistical Distance

Let P and Q be two distributions over a finite set $\mathcal{U}$. Their *statistical distance* (also known as, variation distance), denoted by $SD(P, Q)$, is defined as

$$SD(P, Q) := \frac{1}{2} \sum_{x \in \mathcal{U}} |P(x) - Q(x)| = \max_{\mathcal{S} \subseteq \mathcal{U}} (P(\mathcal{S}) - Q(\mathcal{S}))$$

We will only consider finite distributions.

Claim 1

For any pair of (finite) distribution P and Q, it holds that such

$$SD(P, Q) = \max_{D} (Pr_{x \leftarrow P}[D(x) = 1] - Pr_{x \leftarrow Q}[D(x) = 1]),$$

where D is any algorithm.

Some useful facts

Let P, Q, R be finite distributions, then

Triangle inequality:

$$\mathrm{SD}(P, R) \leq \mathrm{SD}(P, Q) + \mathrm{SD}(Q, R)$$

Repeated sampling:

$$\mathrm{SD}((P, P), (Q, Q)) \leq 2 \cdot \mathrm{SD}(P, Q)$$

Random variables

Distribution ensembles and statistical indistinguishability

Definition 2 (distribution ensembles)

$\mathcal{P} = \{P_n\}_{n \in \mathbb{N}}$ is a distribution ensemble, if P_n is a (finite) distribution for any $n \in \mathbb{N}$.

$\mathcal{P}$ is efficiently samplable (or just efficient), if $\exists$ PPT *Samp* with $\mathrm{Sam}(1^n) \equiv P_n$.

Distribution ensembles and statistical indistinguishability

Definition 2 (distribution ensembles)

$\mathcal{P} = \{P_n\}_{n \in \mathbb{N}}$ is a distribution ensemble, if P_n is a (finite) distribution for any $n \in \mathbb{N}$.
$\mathcal{P}$ is efficiently samplable (or just efficient), if $\exists$ PPT *Samp* with $\mathrm{Sam}(1^n) \equiv P_n$.

Definition 3 (statistical indistinguishability)

Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *statistically indistinguishable*, if $\mathrm{SD}(P_n, Q_n) = \mathrm{neg}(n)$.

Distribution ensembles and statistical indistinguishability

Definition 2 (distribution ensembles)

$\mathcal{P} = \{P_n\}_{n\in\mathbb{N}}$ is a distribution ensemble, if P_n is a (finite) distribution for any $n \in \mathbb{N}$.
$\mathcal{P}$ is efficiently samplable (or just efficient), if $\exists$ PPT *Samp* with $\text{Sam}(1^n) \equiv P_n$.

Definition 3 (statistical indistinguishability)

Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *statistically indistinguishable*, if $\text{SD}(P_n, Q_n) = \text{neg}(n)$.

Alternatively, if $\left|\Delta^{\text{D}}_{(\mathcal{P},\mathcal{Q})}(n)\right| = \text{neg}(n)$, for *any* algorithm D, where
$\Delta^{\text{D}}_{(\mathcal{P},\mathcal{Q})}(n) := \Pr_{x\leftarrow P_n}[\text{D}(1^n, x) = 1] - \Pr_{x\leftarrow Q_n}[\text{D}(1^n, x) = 1].$

Section 2

Computational Indistinguishability

Computational Indistinguishability

Definition 4 (computational indistinguishability)

Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *computationally indistinguishable*, if $\left|\Delta_{(\mathcal{P},\mathcal{Q})}^{\mathsf{D}}(n)\right| = \mathsf{neg}(n)$, for any PPT D.

$(\Delta_{(\mathcal{P},\mathcal{Q})}^{\mathsf{D}}(n) := \Pr_{x \leftarrow P_n}[\Delta \mathsf{D}(1^n, x) = 1] - \Pr_{x \leftarrow Q_n}[\mathsf{D}(1^n, x) = 1])$

Computational Indistinguishability

Definition 4 (computational indistinguishability)

Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *computationally indistinguishable*, if $\left|\Delta_{(\mathcal{P},\mathcal{Q})}^{\mathsf{D}}(n)\right| = \mathsf{neg}(n)$, for any PPT D.

$(\Delta_{(\mathcal{P},\mathcal{Q})}^{\mathsf{D}}(n) := \Pr_{x \leftarrow P_n}[\Delta\mathsf{D}(1^n, x) = 1] - \Pr_{x \leftarrow Q_n}[\mathsf{D}(1^n, x) = 1])$

- Can it be different from the statistical case?

Computational Indistinguishability

> **Definition 4 (computational indistinguishability)**
>
> Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *computationally indistinguishable*, if $\left| \Delta_{(\mathcal{P}, \mathcal{Q})}^{\mathsf{D}}(n) \right| = \mathsf{neg}(n)$, for any PPT D.

$(\Delta_{(\mathcal{P}, \mathcal{Q})}^{\mathsf{D}}(n) := \Pr_{x \leftarrow P_n}[\Delta \mathsf{D}(1^n, x) = 1] - \Pr_{x \leftarrow Q_n}[\mathsf{D}(1^n, x) = 1])$

- Can it be different from the statistical case?
- Non uniform variant

Computational Indistinguishability

Definition 4 (computational indistinguishability)

Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *computationally indistinguishable*, if $\left|\Delta^{\mathsf{D}}_{(\mathcal{P},\mathcal{Q})}(n)\right| = \mathsf{neg}(n)$, for any PPT D.

$(\Delta^{\mathsf{D}}_{(\mathcal{P},\mathcal{Q})}(n) := \Pr_{x \leftarrow P_n}[\Delta \mathsf{D}(1^n, x) = 1] - \Pr_{x \leftarrow Q_n}[\mathsf{D}(1^n, x) = 1])$

- Can it be different from the statistical case?
- Non uniform variant
- Sometime behaves different then expected!

Computational Indistinguishability

Definition 4 (computational indistinguishability)

Two distribution ensembles $\mathcal{P}$ and $\mathcal{Q}$ are *computationally indistinguishable*, if $\left|\Delta^{\mathsf{D}}_{(\mathcal{P},\mathcal{Q})}(n)\right| = \mathsf{neg}(n)$, for any PPT D.

$(\Delta^{\mathsf{D}}_{(\mathcal{P},\mathcal{Q})}(n) := \Pr_{x \leftarrow P_n}[\Delta \mathsf{D}(1^n, x) = 1] - \Pr_{x \leftarrow Q_n}[\mathsf{D}(1^n, x) = 1])$

- Can it be different from the statistical case?
- Non uniform variant
- Sometime behaves different then expected!

Repeated sampling

Question 5

Assume that $\mathcal{P}$ and $\mathcal{Q}$ are computationally indistinguishable, is it always true that $\mathcal{P}^2 = (\mathcal{P}, \mathcal{P})$ and $\mathcal{Q}^2 = (\mathcal{Q}, \mathcal{Q})$ are?

Repeated sampling

Question 5

Assume that $\mathcal{P}$ and $\mathcal{Q}$ are computationally indistinguishable, is it always true that $\mathcal{P}^2 = (\mathcal{P}, \mathcal{P})$ and $\mathcal{Q}^2 = (\mathcal{Q}, \mathcal{Q})$ are?

Assume that $\left|\Delta^{\mathsf{D}}_{(\mathcal{P}^2, \mathcal{Q}^2)}(n)\right| = \delta(n)$ for some PPT D, we would like to prove that $\exists$ PPT D' with $\left|\Delta^{\mathsf{D}}_{(\mathcal{P}, \mathcal{Q})}(n)\right| \geq \delta(n)/2$ for every $n \in \mathbb{N}$.

Repeated sampling

Question 5

Assume that $\mathcal{P}$ and $\mathcal{Q}$ are computationally indistinguishable, is it always true that $\mathcal{P}^2 = (\mathcal{P}, \mathcal{P})$ and $\mathcal{Q}^2 = (\mathcal{Q}, \mathcal{Q})$ are?

Assume that $\left| \Delta_{(\mathcal{P}^2, \mathcal{Q}^2)}^{\mathsf{D}}(n) \right| = \delta(n)$ for some PPT D, we would like to prove that $\exists$ PPT D$'$ with $\left| \Delta_{(\mathcal{P}, \mathcal{Q})}^{\mathsf{D}}(n) \right| \geq \delta(n)/2$ for every $n \in \mathbb{N}$. Indeed

$$
\begin{aligned}
\delta(n) &= |\Pr_{x \leftarrow P_n^2}[\mathsf{D}(x) = 1] - \Pr_{x \leftarrow Q_n^2}[\mathsf{D}(x) = 1]| \\
&\leq \left| \Pr_{x \leftarrow P_n^2}[\mathsf{D}(x) = 1] - \Pr_{x \leftarrow (P_n, Q_n)}[\mathsf{D}(x) = 1] \right| \\
&\quad + \left| \Pr_{x \leftarrow (P_n, Q_n)}[\mathsf{D}(x) = 1] - \Pr_{x \leftarrow Q_n^2}[\mathsf{D}(x) = 1] \right|
\end{aligned}
$$

Repeated sampling

Question 5

Assume that $\mathcal{P}$ and $\mathcal{Q}$ are computationally indistinguishable, is it always true that $\mathcal{P}^2 = (\mathcal{P}, \mathcal{P})$ and $\mathcal{Q}^2 = (\mathcal{Q}, \mathcal{Q})$ are?

Assume that $\left| \Delta^{\mathsf{D}}_{(\mathcal{P}^2, \mathcal{Q}^2)}(n) \right| = \delta(n)$ for some PPT D, we would like to prove that $\exists$ PPT D' with $\left| \Delta^{\mathsf{D}}_{(\mathcal{P}, \mathcal{Q})}(n) \right| \geq \delta(n)/2$ for every $n \in \mathbb{N}$. Indeed

$$
\begin{aligned}
\delta(n) &= |\Pr_{x \leftarrow P_n^2}[\mathsf{D}(x) = 1] - \Pr_{x \leftarrow Q_n^2}[\mathsf{D}(x) = 1]| \\
&\leq \left| \Pr_{x \leftarrow P_n^2}[\mathsf{D}(x) = 1] - \Pr_{x \leftarrow (P_n, Q_n)}[\mathsf{D}(x) = 1] \right| \\
&\quad + \left| \Pr_{x \leftarrow (P_n, Q_n)}[\mathsf{D}(x) = 1] - \Pr_{x \leftarrow Q_n^2}[\mathsf{D}(x) = 1] \right| \\
&= \left| \Delta^{\mathsf{D}}_{(\mathcal{P}^2, (\mathcal{P}, \mathcal{Q}))}(n) \right| + \left| \Delta^{\mathsf{D}}_{((\mathcal{P}, \mathcal{Q}), \mathcal{Q}^2)}(n) \right|
\end{aligned}
$$

Repeated sampling

Question 5

Assume that $\mathcal{P}$ and $\mathcal{Q}$ are computationally indistinguishable, is it always true that $\mathcal{P}^2 = (\mathcal{P}, \mathcal{P})$ and $\mathcal{Q}^2 = (\mathcal{Q}, \mathcal{Q})$ are?

Assume that $\left| \Delta_{(\mathcal{P}^2, \mathcal{Q}^2)}^{\mathsf{D}}(n) \right| = \delta(n)$ for some PPT D, we would like to prove that $\exists$ PPT D' with $\left| \Delta_{(\mathcal{P}, \mathcal{Q})}^{\mathsf{D}}(n) \right| \geq \delta(n)/2$ for every $n \in \mathbb{N}$. Indeed

$$
\begin{aligned}
\delta(n) &= |\Pr_{x \leftarrow P_n^2}[D(x) = 1] - \Pr_{x \leftarrow Q_n^2}[D(x) = 1]| \\
&\leq \left| \Pr_{x \leftarrow P_n^2}[D(x) = 1] - \Pr_{x \leftarrow (P_n, Q_n)}[D(x) = 1] \right| \\
&\quad + \left| \Pr_{x \leftarrow (P_n, Q_n)}[D(x) = 1] - \Pr_{x \leftarrow Q_n^2}[D(x) = 1] \right| \\
&= \left| \Delta_{(\mathcal{P}^2, (\mathcal{P}, \mathcal{Q}))}^{\mathsf{D}}(n) \right| + \left| \Delta_{((\mathcal{P}, \mathcal{Q}), \mathcal{Q}^2)}^{\mathsf{D}}(n) \right|
\end{aligned}
$$

So either $|\Delta_{(\mathcal{P}^2, (\mathcal{P}, \mathcal{Q}))}^{\mathsf{D}}(n)| \geq \delta(n)/2$, or $|\Delta_{((\mathcal{P}, \mathcal{Q}), \mathcal{Q}^2)}^{\mathsf{D}}(n)| \geq \delta/2$

- Assume that $\left|\Delta^{\mathsf{D}}_{(\mathcal{P}^2, \mathcal{Q}^2)}(n)\right| \geq 1/p(n)$ for some $p \in$ poly and infinitely many n's, and assume wlg. that $\left|\Delta^{\mathsf{D}}_{\mathcal{P}^2, (\mathcal{P}, \mathcal{Q})}(n)\right| \geq 1/2p(n)$ for infinitely many n's.

- Assume that $\left|\Delta^{\mathsf{D}}_{(\mathcal{P}^2,\mathcal{Q}^2)}(n)\right| \geq 1/p(n)$ for some $p \in$ poly and infinitely many n's, and assume wlg. that $\left|\Delta^{\mathsf{D}}_{\mathcal{P}^2,(\mathcal{P},\mathcal{Q})}(n)\right| \geq 1/2p(n)$ for infinitely many n's.
- Can we use D to contradict the fact that $\mathcal{P}$ and $\mathcal{Q}$ are computationally close?

- Assume that $\left|\Delta^{\mathsf{D}}_{(\mathcal{P}^2,\mathcal{Q}^2)}(n)\right| \geq 1/p(n)$ for some $p \in$ poly and infinitely many n's, and assume wlg. that $\left|\Delta^{\mathsf{D}}_{\mathcal{P}^2,(\mathcal{P},\mathcal{Q})}(n)\right| \geq 1/2p(n)$ for infinitely many n's.
- Can we use D to contradict the fact that $\mathcal{P}$ and $\mathcal{Q}$ are computationally close?
- Assuming that $\mathcal{P}$ and $\mathcal{Q}$ are efficiently samplable

- Assume that $\left|\Delta^{\mathsf{D}}_{(\mathcal{P}^2, \mathcal{Q}^2)}(n)\right| \geq 1/p(n)$ for some $p \in$ poly and infinitely many n's, and assume wlg. that $\left|\Delta^{\mathsf{D}}_{\mathcal{P}^2, (\mathcal{P}, \mathcal{Q})}(n)\right| \geq 1/2p(n)$ for infinitely many n's.

Hardcore Predicates

Hardcore predicates

- Building blocks in constructions of PRGS from OWF

Hardcore predicates

- Building blocks in constructions of PRGS from OWF

Definition 11 (hardcore predicates)

An efficiently computable function $b : \{0, 1\}^n \mapsto \{0, 1\}$ is an hardcore predicate of $f : \{0, 1\}^n \mapsto \{0, 1\}^n$, if

$$\Pr[P(f(U_n)) = b(U_n)] \leq \frac{1}{2} + \text{neg}(n),$$

for any PPT P.

Hardcore predicates

- Building blocks in constructions of PRGS from OWF

Definition 11 (hardcore predicates)

An efficiently computable function $b : \{0,1\}^n \mapsto \{0,1\}$ is an hardcore predicate of $f : \{0,1\}^n \mapsto \{0,1\}^n$, if

$$\Pr[P(f(U_n)) = b(U_n)] \leq \frac{1}{2} + \text{neg}(n),$$

for any PPT P.

- Does the existence of an hardcore predicate for f, implies that f is one way?

Hardcore predicates

- Building blocks in constructions of PRGS from OWF

Definition 11 (hardcore predicates)

An efficiently computable function $b : \{0,1\}^n \mapsto \{0,1\}$ is an hardcore predicate of $f : \{0,1\}^n \mapsto \{0,1\}^n$, if

$$\Pr[P(f(U_n)) = b(U_n)] \leq \frac{1}{2} + \mathsf{neg}(n),$$

for any PPT P.

- Does the existence of an hardcore predicate for f, implies that f is one way? If f is a (one-way) permutation?

Hardcore predicates

- Building blocks in constructions of PRGS from OWF

Definition 11 (hardcore predicates)

PRGs from OWPs

OWP to PRG

Claim 12

Let $f : \{0,1\}^n \mapsto \{0,1\}^n$ be a permutation and let
$b : \{0,1\}^n \mapsto \{0,1\}$ be an hardcore predicate for f, then
$g(x) = (f(x), b(x))$ is a PRG.

OWP to PRG

Claim 12

Let $f : \{0,1\}^n \mapsto \{0,1\}^n$ be a permutation and let
$b : \{0,1\}^n \mapsto \{0,1\}$ be an hardcore predicate for f, then
$g(x) = (f(x), b(x))$ is a PRG.

Proof: Assume $\exists$ a PPT D, and infinite set $\mathcal{I} \subseteq \mathbb{N}$ and $p \in$ poly
with

$$\left| \Delta^{\mathsf{D}}_{g(U_n), U_{n+1}} \right| > \varepsilon(n) = 1/p(n)$$

for any $n \in \mathcal{I}$. We use D for breaking the hardness of b.

OWP to PRG

Claim 12

Let $f : \{0,1\}^n \mapsto \{0,1\}^n$ be a permutation and let
$b : \{0,1\}^n \mapsto \{0,1\}$ be an hardcore predicate for f, then
$g(x) = (f(x), b(x))$ is a PRG.

Proof: Assume $\exists$ a PPT D, and infinite set $\mathcal{I} \subseteq \mathbb{N}$ and $p \in$ poly
with

$$\left| \Delta^D_{g(U_n), U_{n+1}} \right| > \varepsilon(n) = 1/p(n)$$

for any $n \in \mathcal{I}$. We use D for breaking the hardness of b.

- We assume wlg. that
  $\Pr[D(g(U_n)) = 1] - \Pr[D(U_{n+1}) = 1] \geq \varepsilon(n)$ for any $n \in \mathcal{I}$
  (can we do it?), and fix $n \in \mathcal{I}$.

OWP to PRG cont.

- Let $\delta(n) = \Pr[D(U_{n+1}) = 1]$ (note that $\Pr[D(G(U_n)) = 1] = \delta + \varepsilon$).

OWP to PRG cont.

- Let $\delta(n) = \Pr[D(U_{n+1}) = 1]$ (note that $\Pr[D(G(U_n)) = 1] = \delta + \varepsilon$).

- Compute

$$\begin{aligned}
\delta &= \Pr[D(f(U_n), U_1) = 1] \\
&= \Pr[U_1 = b(U_n)] \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = b(U_n)] \\
&+ \Pr[U_1 = \overline{b(U_n)}] \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = \overline{b(U_n)}]
\end{aligned}$$

OWP to PRG cont.

- Let $\delta(n) = \Pr[D(U_{n+1}) = 1]$ (note that $\Pr[D(G(U_n)) = 1] = \delta + \varepsilon$).
- Compute

$$
\begin{aligned}
\delta &= \Pr[D(f(U_n), U_1) = 1] \\
&= \Pr[U_1 = b(U_n)] \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = b(U_n)] \\
&+ \Pr[U_1 = \overline{b(U_n)}] \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = \overline{b(U_n)}] \\
&= \frac{1}{2}(\delta + \varepsilon) + \frac{1}{2} \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = \overline{b(U_n)}].
\end{aligned}
$$

OWP to PRG cont.

- Let $\delta(n) = \Pr[D(U_{n+1}) = 1]$ (note that $\Pr[D(G(U_n)) = 1] = \delta + \varepsilon$).

- Compute

$$
\begin{aligned}
\delta &= \Pr[D(f(U_n), U_1) = 1] \\
&= \Pr[U_1 = b(U_n)] \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = b(U_n)] \\
&+ \Pr[U_1 = \overline{b(U_n)}] \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = \overline{b(U_n)}] \\
&= \frac{1}{2}(\delta + \varepsilon) + \frac{1}{2} \cdot \Pr[D(f(U_n), U_1) = 1 \mid U_1 = \overline{b(U_n)}].
\end{aligned}
$$

Hence,

$$
\Pr[D(f(U_n), \overline{b(U_n)}) = 1] = \delta - \varepsilon \tag{1}
$$

OWP to PRG cont.

- $\Pr[D(f(U_n), b(U_n)) = 1] = \delta + \varepsilon$
- $\Pr[D(f(U_n), \overline{b(U_n)}) = 1] = \delta - \varepsilon$

OWP to PRG cont.

- $\Pr[D(f(U_n), b(U_n)) = 1] = \delta + \varepsilon$
- $\Pr[D(f(U_n), \overline{b(U_n)}) = 1] = \delta - \varepsilon$
- Consider the following algorithm for predicting b:

Algorithm 13 (P)

Input: $y \in \{0, 1\}^n$

1. Flip a random coin $c \leftarrow \{0, 1\}$.

2. If $D(y, c) = 1$ output c, otherwise, output $\overline{c}$.

OWP to PRG cont.

- $\Pr[D(f(U_n), b(U_n)) = 1] = \delta + \varepsilon$
- $\Pr[D(f(U_n), \overline{b(U_n)}) = 1] = \delta - \varepsilon$
- Consider the following algorithm for predicting b:

Algorithm 13 (P)

Input: $y \in \{0, 1\}^n$

1. Flip a random coin $c \leftarrow \{0, 1\}$.

2. If $D(y, c) = 1$ output c, otherwise, output $\overline{c}$.

- It follows that

$$\Pr[P(f(U_n)) = b(U_n)]$$
$$= \Pr[c = b(U_n)] \cdot \Pr[D(f(U_n), c) = 1 \mid c = b(U_n)]$$
$$+ \Pr[c = \overline{b(U_n)}] \cdot \Pr[D(f(U_n), c) = 0 \mid c = \overline{b(U_n)}]$$

OWP to PRG cont.

- $\Pr[D(f(U_n), b(U_n)) = 1] = \delta + \varepsilon$
- $\Pr[D(f(U_n), \overline{b(U_n)}) = 1] = \delta - \varepsilon$
- Consider the following algorithm for predicting b:

Algorithm 13 (P)

Input: $y \in \{0, 1\}^n$

1. Flip a random coin $c \leftarrow \{0, 1\}$.
2. If $D(y, c) = 1$ output c, otherwise, output $\overline{c}$.

- It follows that

$$\Pr[P(f(U_n)) = b(U_n)]$$
$$= \Pr[c = b(U_n)] \cdot \Pr[D(f(U_n), c) = 1 \mid c = b(U_n)]$$
$$+ \Pr[c = \overline{b(U_n)}] \cdot \Pr[D(f(U_n), c) = 0 \mid c = \overline{b(U_n)}]$$
$$= \frac{1}{2} \cdot (\delta + \varepsilon) + \frac{1}{2}(1 - \delta + \varepsilon) = \frac{1}{2} + \varepsilon.$$

OWP to PRG cont.

Remark 14

- Prediction to distinguishing (homework)

OWP to PRG cont.

Remark 14

- Prediction to distinguishing (homework)
- PRG from any OWF: (1) Regular OWFs, first use pairwise hashing to convert into "almost" permutation. (2) Any OWF, harder

Section 6

PRG Length Extension

PRG Length Extension

Construction 15 (iterated function)

Given a length increasing function $g\colon \{0,1\}^n \mapsto \{0,1\}^\ell$ and $i \in \mathbb{N}$, define $g^i\colon \{0,1\}^n \mapsto \{0,1\}^{n+i(\ell-n)}$ as
$$g^i(x) = x^{i-1}_{n+1,\ldots,|x^{i-1}|}, g(x^{i-1}_{1,\ldots,n}),$$
where $x^{i-1} = g^{i-1}(x)$ and $g^0(x) = x$.

PRG Length Extension

Construction 15 (iterated function)

Given a length increasing function $g\colon \{0,1\}^n \mapsto \{0,1\}^\ell$ and $i \in \mathbb{N}$, define $g^i\colon \{0,1\}^n \mapsto \{0,1\}^{n+i(\ell-n)}$ as
$$g^i(x) = x^{i-1}_{n+1,\ldots,|x^{i-1}|}, g(x^{i-1}_{1,\ldots,n}),$$
where $x^{i-1} = g^{i-1}(x)$ and $g^0(x) = x$.

Claim 16

Let $g\colon \{0,1\}^n \mapsto \{0,1\}^{n+1}$ be a PRG, then $g^t\colon \{0,1\}^n \mapsto \{0,1\}^{n+t(n)}$ is a PRG, for any $t \in$ poly.

PRG Length Extension

Construction 15 (iterated function)

Given a length increasing function $g: \{0,1\}^n \mapsto \{0,1\}^\ell$ and $i \in \mathbb{N}$, define $g^i: \{0,1\}^n \mapsto \{0,1\}^{n+i(\ell-n)}$ as
$$g^i(x) = x^{i-1}_{n+1,\dots,|x^{i-1}|}, g(x^{i-1}_{1,\dots,n}),$$
where $x^{i-1} = g^{i-1}(x)$ and $g^0(x) = x$.

Claim 16

Let $g: \{0,1\}^n \mapsto \{0,1\}^{n+1}$ be a PRG, then $g^t: \{0,1\}^n \mapsto \{0,1\}^{n+t(n)}$ is a PRG, for any $t \in$ poly.

Proof: Assume $\exists$ a PPT D, an infinite set $\mathcal{I} \subseteq \mathbb{N}$ and $p \in$ poly with
$$\left| \Delta^{\mathsf{D}}_{g^t(U_n), U_{n+t(n)}} \right| > \varepsilon(n) = 1/p(n),$$
for any $n \in \mathcal{I}$. We use D for breaking the hardness of g.

PRG Length Extension cont.

- Fix $n \in \mathbb{N}$, for $i \in \{0, \dots, t = t(n)\}$, let $H^i = U_{t-i}, g^i(U_n)$
  (i.e., the distribution of H^i is $\left(x, g^i(x')\right)_{x \leftarrow \{0,1\}^{t-i}, x' \leftarrow \{0,1\}^n}$)

PRG Length Extension cont.

- Fix $n \in \mathbb{N}$, for $i \in \{0, \ldots, t = t(n)\}$, let $H^i = U_{t-i}, g^i(U_n)$
  (i.e., the distribution of H^i is $\left(x, g^i(x')\right)_{x \leftarrow \{0,1\}^{t-i}, x' \leftarrow \{0,1\}^n}$)
- Note that $H^0 \equiv U_{n+t}$ and $H^t \equiv g^t(U_n)$.

PRG Length Extension cont.

- Fix $n \in \mathbb{N}$, for $i \in \{0, \ldots, t = t(n)\}$, let $H^i = U_{t-i}, g^i(U_n)$
  (i.e., the distribution of H^i is $(x, g^i(x'))_{x \leftarrow \{0,1\}^{t-i}, x' \leftarrow \{0,1\}^n}$)

- Note that $H^0 \equiv U_{n+t}$ and $H^t \equiv g^t(U_n)$.

Algorithm 17 (D′)

Input: 1^n and $y \in \{0, 1\}^{n+1}$

1. Sample $i \leftarrow [t]$
2. Return $D(1^n, U_{t-i}, y_{n+1}, g^{i-1}(y_{1,\ldots,n}))$.

PRG Length Extension cont.

- Fix $n \in \mathbb{N}$, for $i \in \{0, \ldots, t = t(n)\}$, let $H^i = U_{t-i}, g^i(U_n)$
  (i.e., the distribution of H^i is $\left(x, g^i(x')\right)_{x \leftarrow \{0,1\}^{t-i}, x' \leftarrow \{0,1\}^n}$)
- Note that $H^0 \equiv U_{n+t}$ and $H^t \equiv g^t(U_n)$.

Algorithm 17 (D′)

Input: 1^n and $y \in \{0,1\}^{n+1}$

1. Sample $i \leftarrow [t]$
2. Return D$(1^n, U_{t-i}, y_{n+1}, g^{i-1}(y_{1,\ldots,n}))$.

Claim 18

It holds that $\left| \Delta^{D'}_{g(U_n), U_{n+1}} \right| > \varepsilon(n)/t(n)$

PRG Length Extension cont.

- Fix $n \in \mathbb{N}$, for $i \in \{0, \ldots, t = t(n)\}$, let $H^i = U_{t-i}, g^i(U_n)$
  (i.e., the distribution of H^i is $(x, g^i(x'))_{x \leftarrow \{0,1\}^{t-i}, x' \leftarrow \{0,1\}^n}$)
- Note that $H^0 \equiv U_{n+t}$ and $H^t \equiv g^t(U_n)$.

Algorithm 17 (D′)

Input: 1^n and $y \in \{0, 1\}^{n+1}$

1. Sample $i \leftarrow [t]$
2. Return D$(1^n, U_{t-i}, y_{n+1}, g^{i-1}(y_{1,\ldots,n}))$.

Claim 18

It holds that $\left| \Delta_{g(U_n), U_{n+1}}^{D'} \right| > \varepsilon(n)/t(n)$
